Launch campaign

Ask AI ♥

Then upload your contact list in CSV format and select an assistant from the list. That's it — you're ready to launch the campaign!

Twilio Phone Number Creation

Click on “Phone Numbers” in the side menu, then click “Create Phone Number.”

Go to the third tab, “Import Twilio,” and create an account on Twilio using the on- screen instructions.

Number	Type	Capabilities				Address Requirement	Monthly fee	Buy
		Voice	SMS	MMS	Fax			
+1 707 247 4365 ▲ Piercy, CA US	Local	📞	💬	💬	📠	None	\$1.15	Buy
+1 229 518 1048 ▲ Albany, GA US	Local	📞	💬	💬	📠	None	\$1.15	Buy
+1 224 643 4293 ▲ Lake Villa, IL US	Local	📞	💬	💬	📠	None	\$1.15	Buy
+1 321 499 2629 ▲ Melbourne, FL US	Local	📞	💬	💬	📠	None	\$1.15	Buy
+1 918 558 2813 ▲ Melroster, OK US	Local	📞	💬	💬	📠	None	\$1.15	Buy

If you don’t have a Twilio number, purchase one from the “Buy a Number” section in your Twilio console.

The screenshot shows the Twilio console interface for a phone number. At the top, there are buttons for '+ Buy number' and 'Import'. Below these, the phone number '+1 (707) 247 4365' is displayed with its Inbound Number and a note that it was imported from a Twilio account. The 'Inbound' section includes a dropdown menu for selecting an assistant. The 'Outbound' section includes a dropdown menu for selecting an assistant and a green 'Outbound Call' button.

After importing, select the assistant for inbound and outbound — and you're all set.

Other Important Points

Required information

Outbound Campaigns **require only one column** in your CSV file: the phone number.

- The column header **must be exactly** **number** (all lowercase).
- Phone numbers **must be in E.164 format**:

[+][country code][subscriber number including area code]

E.164 Format Rules:

- Example: **14151234567**
- Maximum: **15 digits** No spaces,
- hyphens, or special characters

Sample CSV:

number

14151231234

14153455678

Tips for Clean Data

- ✓ Save your CSV file with **UTF-8 encoding** to avoid character errors.
- ✓ Avoid blank rows or duplicate headers.
- ✓ Ensure column headers match the **variables** used in your assistant.
- ✓ Double-check phone number formatting before uploading.

Avoiding Spam / Low Answer Rates

To improve your connection rates and build caller trust:

- ✓ Use **verified phone numbers** from Twilio.
- ✓ Implement **caller ID standards** like **SHAKEN/STIR** and **CNAM** where applicable.
- ✓ Avoid using numbers previously flagged for spam — start fresh if needed.

This improves your caller reputation and increases the chances of your calls being answered.

Dynamic Variables

Outbound Campaigns allow users to specify dynamic variables to pass to assistants via additional columns in the CSV file. They can accept one or more additional columns.

Sample CSV with Dynamic Variables:

number	name	customer_issue
☰14151231234	John	password reset
☰14153455678	Mary	address update

In your assistant prompt, use:

Hi {{name}}, we noticed you're facing a {{customer_issue}}.

⚠ Variable Naming Rules:

- Column names **cannot have spaces** ☰ Use `{{customer_issue}}` , not `{{customer issue}}`
- Column names **must start with a letter**
- Avoid special characters and keep names descriptive
